## Abstracts

The global Carbon Neutrality Consulting Services market size is predicted to grow from US\$ 19879 million in 2025 to US\$ 32770 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Carbon neutrality consulting services are systematic professional services provided to governments, enterprises, and organizations. They aim to help clients achieve a balance between carbon emissions and carbon absorption, ultimately reaching the goal of 'net zero emissions,' by assessing current carbon emissions, designing emission reduction pathways, planning carbon offsetting schemes, and building management systems. This service covers carbon inventory, technology application, policy interpretation, trading guidance, and carbon neutrality certification, helping clients address climate challenges, fulfill their social responsibilities, and enhance their green competitiveness.

Driven by accelerated global climate governance and the 'dual carbon' goal, the carbon neutrality consulting service market has broad prospects. Stricter policies and regulations, the expansion of green finance, and surging demand for corporate transformation have spurred specialized demand for carbon accounting, emission reduction technologies, and carbon asset management. It is expected that over the next decade, this field will evolve towards digitalization and industry-specific specialization, extending to new scenarios such as supply chain management and ESG integration, becoming a key supporting industry for promoting a low-carbon economy. Market demand and the level of professional talent will continue to increase.
