## Abstracts

The global Carbon Paste Continuous Kneaders market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Continuous Kneader for Carbon Paste is a rotating and reciprocating single-screw extruder designed for efficient mixing of green anode paste at high throughputs.

The use of electronic systems to control and monitor the Grout Agitator and Mixer operation, such as the speed, torque, temperature, and pressure. These systems can also communicate with other devices and networks to enable remote control and data analysis . The use of high-performance materials to enhance the durability, corrosion resistance, and wear resistance of Grout Agitators and Mixers. Some examples of high-performance materials are stainless steel, carbon fiber, and ceramic . The use of variable-speed motors to adjust the mixing intensity and duration according to the grout type, viscosity, and application. This can improve the grout quality and consistency, as well as reduce the energy consumption and noise emission . The use of modular designs to enable the interchangeability and compatibility of Grout Agitators and Mixers with different capacities, configurations, and accessories. This can increase the versatility and customization of grouting equipment .
