The global Carbon Rigid Felt and Graphite Rigid Felt market size is predicted to grow from US\$ 428 million in 2025 to US\$ 701 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Carbon Rigid Felt: It is a felt-like material with certain strength and hardness, primarily made from carbon fibers or other carbon fiber-containing materials through processes such as needle punching and bonding. During the preparation process, the raw materials undergo carbonization to remove some non-carbon elements, allowing the fibers to interlace and form a three-dimensional network structure. It has a high carbon content but a relatively low degree of graphitization, retaining some of the original characteristics of the fibers. It exhibits good thermal insulation properties, chemical stability, and certain mechanical strength.

Graphite Rigid Felt: It is primarily a felt-like material obtained from carbonaceous raw materials through high-temperature carbonization and graphitization processes. It has a high degree of graphitization, with carbon atoms arranged in a more regular and orderly manner, forming a crystal structure similar to graphite. Hard graphite felt possesses excellent electrical conductivity, thermal conductivity, and high-temperature resistance, along with good chemical stability and mechanical strength.

United States market for Carbon Rigid Felt and Graphite Rigid Felt is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
