Carbon Steel Compression Weighing Module is an industrial weighing component based on compression load sensing technology, integrating carbon steel structural elements with a compression-type load cell. It is primarily used in static and heavy-load weighing applications such as hoppers, silos, platform scales, and large-scale industrial weighing systems. By transferring vertical loads directly to the compression load cell, the module ensures stable and reliable weight measurement, and is widely applied in industrial process control, material batching, checkweighing, and high-capacity static load monitoring. In 2025, the global market size of carbon steel compression weighing modules is approximately USD 691.9 million, with annual shipment volume of about 1.994 million units. The market is expected to grow at a compound annual growth rate (CAGR) of around 6.27% over the next decade. The average market price is approximately USD 347 per unit, typical single-line production capacity ranges from 120,000 to 280,000 units per year, and industry gross margins generally fall within the 27%–38% range.
