The global Carbon Steel Light Pole market size is predicted to grow from US\$ 2090 million in 2025 to US\$ 2880 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Carbon steel light poles are outdoor lighting support structural parts made of carbon steel as the main raw material. They are usually rolled from steel plates or welded to steel pipes. The poles can be designed into conical, polygonal or equal-diameter structures, and surface treatment processes such as hot-dip galvanizing and spraying are used to improve corrosion resistance and service life. Its main function is to provide a stable bearing and installation foundation for lighting fixtures on roads, streets, parks, squares and industrial areas. From the perspective of performance characteristics, carbon steel light poles have the advantages of high strength, good rigidity, strong wind load resistance, and reliable structure, and are suitable for medium-to-high-height lighting and installation of high-power lamps. From the perspective of engineering applications, carbon steel light poles have become one of the most commonly used types of light poles in municipal road lighting and engineering lighting due to their mature manufacturing technology, wide range of specifications, and controllable costs. In 2025, global Carbon Steel Light Pole production reached approximately 4,716 K Units, with an average global market price of around US\$ 453 per unit.

The annual production capacity of iron Carbon Steel Light Pole is 6,000 K Units, with a gross profit margin of about 15%.

The upstream mainly includes steel and surface treatment materials and manufacturing consumables. The core includes hot-rolled coils and steel pipes, steel plates for flanges and connectors, welding wire flux, zinc ingots and fluxes for hot-dip galvanizing, powder

coatings or paints for spraying, fastener steel for embedded parts and anchor bolts, as well as packaging consumables and logistics services. Among them, price fluctuations of steel and zinc are the most sensitive to cost transmission. Downstream are mainly municipal and transportation infrastructure construction units, general contractors of street lighting and smart lighting projects, park and commercial real estate developers, operators of ports, airports and large parking lots, as well as street lighting manufacturers and smart lighting system integrators. Typical demand comes from road construction and reconstruction, smart street lighting upgrades, high pole lighting and landscape lighting projects.

Material costs usually account for about 65% to 78% of the total cost, of which steel accounts for about 45% to 60%, galvanizing zinc consumption and galvanizing processing account for about 10% to 18%, coating materials account for about 3% to 6%, fasteners and embedded parts account for about 4% to 8%; manufacturing costs usually account for 12% to 20%, and others account for 5% to 12%.
