The global Carbon Tetrachloride (CTC) market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Carbon tetrachloride, also known by many other names (the most notable being tetrachloromethane, also recognized by the IUPAC, carbon tet in the cleaning industry, Halon-104 in firefighting, and Refrigerant-10 in HVACR) is an organic compound with the chemical formula CCl4. It was formerly widely used in fire extinguishers, as a precursor to refrigerants and as a cleaning agent. It is a colourless liquid with a 'sweet' smell that can be detected at low levels. It has practically no flammability at lower temperatures.

US EPA is the main supervision organization of CTC, due to the harmful to ozone layer. US CTC production is relatively stable from 2014 to 2017, while it met a large growth rate of 18.8% in 2013-2014.
