The global Carbon Textile Reinforced Concrete market size is predicted to grow from US\$ 23 million in 2025 to US\$ 28.1 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

Carbon fibers are from the most recent & probability the most spectacular addition to the range of fiber available for commercial use. Carbon fiber comes under the very high modulus of elasticity and flexural strength. These are expansive. Their strength & stiffness characteristics have been found to be superior even to those of steel. But they are more vulnerable to damage than even glass fiber, and hence are generally treated with resin coating.

Carbon Textile Reinforced Concrete is one type of Textile Reinforced Concrete which is made by carbon fiber.

The manufacturers are concentrated in North America, Europe and Japan. Weserland is the largest manufacturer in the global market. The industry has a relatively low concentration.

Europe is the largest production region in the world, which occupied 31% share. The manufacture shares of North America, Japan and China were 23%, 17% and 6%.
