The global Carbon Thermoplastic (CFRTP) Composites market size is predicted to grow from US\$ 1671 million in 2025 to US\$ 2319 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Carbon Thermoplastic (CFRTP) Composites are advanced composite materials made from carbon fibers and thermoplastic resins. They combine the high strength and lightweight properties of carbon fibers with the advantages of thermoplastic resins, such as remelting capability, short molding cycle, good toughness, and environmental recyclability, making them ideal structural materials for aerospace, automotive manufacturing, and sporting goods industries.

The upstream sector consists of carbon fiber precursors and thermoplastic resins (PEEK, PPS, PA, etc.) as raw materials; the midstream sector focuses on prepreg, fabric, and component processing; and the downstream sector has wide applications, primarily concentrated in high-performance structural components for aerospace and lightweight automotive applications.

Global sales of thermoplastic carbon fiber composites are projected to reach approximately 30,000 tons in 2025, with an average ex-factory price of approximately US\$57 per kilogram.

Carbon thermoplastic composites, also known as carbon fiber reinforced thermoplastic composites, are becoming one of the fastest-growing segments in the advanced composite materials field globally due to their core advantages such as lightweight, high strength, recyclability, and short molding cycles.

The core driving force behind this industry's development stems first from the increasingly urgent global demand for lightweight materials. In the transportation sector, particularly in new energy vehicles and the aerospace industry, reducing vehicle or fuselage weight to improve energy efficiency and extend driving range has become a rigid requirement. Carbon thermoplastic composites, with their specific strength far exceeding that of traditional metal materials, have become an ideal alternative.

Secondly, the recyclability advantage of the thermoplastic matrix aligns with the global development direction of carbon neutrality and the circular economy. Approximately 31% of manufacturers are driving the replacement of thermoset with thermoplastic materials due to increased requirements for component recyclability, addressing the environmental pain point of the difficulty in degrading and recycling thermoset composites.
