Carbonated water (also known as soda water, sparkling water, fizzy water, club soda, water with gas, in many places as mineral water, or especially in the United States as seltzer or seltzer water) is water containing dissolved carbon dioxide gas, either artificially injected under pressure or occurring due to natural geological processes. Carbonation causes small bubbles to form, giving the water an effervescent quality. Common forms include sparkling natural mineral water, club soda, and commercially produced sparkling water. Various carbonated waters are sold in bottles and cans, with some also produced on demand by commercial carbonation systems in bars and

restaurants, or made at home using a carbon dioxide cartridge. Where the sparkling water comes from is the only difference –whether it is a natural or artificial source of carbonation.
