The global Carbonyl Iron Powder and Ultra Fine Iron Powder market size is predicted to grow from US$ 183 million in 2025 to US$ 188 million in 2031; it is expected to grow at a CAGR of 0.4% from 2025 to 2031.

Iron powder is formed as a whole from several other iron particles. The particle sizes vary anywhere from 20-200 ?m. The iron properties differ depending on the production method and history of a specific iron powder. There are three types of iron powder classifications: reduced iron powder, atomized powder, and electrolyte iron powder. Each type is used in various applications depending on their properties. There is very little difference in the visual appearances of reduced iron powder and atomized iron powder. Carbonyl iron is a highly pure (97.5% for grade S, 99.5+% for grade R) iron, prepared by chemical decomposition of purified iron pentacarbonyl. It usually has the appearance of grey powder, composed of spherical microparticles. Most of the impurities are carbon, oxygen, and nitrogen. Ultra Fine Iron Powder, in our report, refers to iron powder’s particle size is smaller than 10?m. Ultrafine iron powder has smaller particles, which has a very good electrical magnetic optical effect. This not only affects the sintering properties of the material, but also the final physical properties of the material. Ultrafine iron powder is widely used in the field of electromagnetic shielding & powder metallurgy.

Global Carbonyl Iron Powder and Ultra Fine Iron Powder key players include BASF, JFE, Gripm, Jiangxi Yuean, Jilin Jien, etc. Global top five manufacturers hold a share about 70%. Europe and China is the largest market, both with a share about 40%, followed by Japan, with a share about 15 percent. In terms of product, Carbonyl Iron
