The report requires updating with new data and is sent in 48 hours after order is placed.

Carbonyl metal powder is a special metal powder, which refers to fine metal powder prepared by thermal decomposition of carbonyl compounds (such as carbonyl iron, carbonyl nickel, carbonyl cobalt, etc.). This preparation method usually involves decomposing metal carbonyl compounds into metals and gases (such as carbon monoxide) at high temperatures to obtain metal powders. The particle size of these metal powders is usually in the micrometer or even nanometer level, and has specific physical and chemical properties.

The global Carbonyl Metal Powder market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
