## Abstracts

The global Carboxymethyl Cellulose Pharmaceutical Excipients market size is predicted to grow from US\$ 168 million in 2025 to US\$ 217 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

Carboxymethyl cellulose (also referred as CMC and Sodium Carboxymethyl Cellulose) can be described as an anionic water-soluble polymer produced from naturally occurring cellulose by etherification, substituting the hydroxyl groups with carboxymethyl groups on the cellulose chain.

The medical-grade carboxymethyl cellulose (CMC) market is driven by the increasing demand for CMC in various medical applications, such as wound care, ophthalmic solutions, and pharmaceutical formulations. Medical-grade CMC offers advantages like biocompatibility, excellent moisture retention, and ease of gel formation, making it suitable for wound healing and other medical uses. The rise in chronic diseases, aging population, and the need for advanced wound care solutions fuel market growth. Moreover, the growing use of CMC in the pharmaceutical industry to improve drug stability and release further contributes to market expansion. However, the market also faces challenges, including the availability of alternative materials and the need for stringent regulatory compliance to ensure the safety and efficacy of medical-grade CMC products. To succeed, manufacturers must focus on innovation, adhere to quality standards, and collaborate with healthcare providers to explore new medical applications and address the challenges to meet the increasing demand for medical-grade carboxymethyl cellulose.
