Carcinine (or Decarboxy Carnosine HCL), commercially available as Alistin, is a natural peptoid that has been identified as a potent anti-glycant and anti-oxidant. Furthermore, it has the advantage of being relatively stable when in contact with air. Derived from carnosine, another natural anti-oxidative compound, Carcinine displays similar anti-oxidative properties while being substantially more stable than its parent compound as shown below. This increased resistance to enzymatic degradation, makes Alistin a better candidate than carnosine for in vivo and therefore cosmetic applications.
