Liquid crystal polymer (LCP) is a type of aromatic polymer. They are extremely chemically resistant, thermally resistant, and chemically inert. They can replace metals, ceramics, composites, and many other traditional materials because of their superior

properties. They are mainly useful for mechanical and electrical parts because of their high strength and inertness. Card edge liquid crystal polymer (LCP) connectors are also known as edge card liquid crystal polymer (LCP) connectors. These connectors are fixed devices that mate with the edges of the double-sided and single-sided printed circuit boards to provide an external connection.
