Cardiac monitoring generally refers to continuous or intermittent monitoring of heart activity, generally by electrocardiography, with assessment of the patient's condition relative to their cardiac rhythm. It is different from hemodynamic monitoring, which monitors the pressure and flow of blood within the cardiovascular system. The two may be performed simultaneously on critical heart patients. Cardiac monitoring with a small device worn by an ambulatory patient is known as ambulatory electrocardiography. Transmitting data from a monitor to a distant monitoring station is known as telemetry or biotelemetry.

Cardiovascular diseases have become one of the primary reasons for mortality and are becoming a major concern in most parts of the world. Coronary heart disease (CHD) is the most common type of heart disease, with a death toll of more than 370,000 people annually. The American Heart Association (AHA) reports cardiovascular disease to be
