The report requires updating with new data and is sent in 48 hours after order is placed.

The remote cardiac monitoring is a method by which the data from patients implanted rhythm management system can be transferred directly to the physician's office. The physician treating a particular individual gets the information by using the integrated aerial in which the implant automatically sends medical and technical information from the heart. This gives access to the physician to monitor the accurate and current clinical information even if the patient is not in the hospital.
