The report requires updating with new data and is sent in 48 hours after order is placed.

The global Cardiac Safety Assessment Services market size is predicted to grow from US\$ 798 million in 2025 to US\$ 1458 million in 2031; it is expected to grow at a CAGR of 10.6% from 2025 to 2031.

Cardiac safety assessment is an important, animal or animal tissue-based experimental procedure that must be considered before entering into clinical trials. In the past few years, some drugs that have been put into clinical use have had to be withdrawn from the market or their approval has been delayed because of their potential cardiotoxicity or causing severe cardiac arrhythmias.

Drug-induced cardiotoxicity is one of the main reasons for new drugs to be discontinued or removed from the market. Therefore, cardiac safety assessment is a mandatory experimental procedure for various new drugs before entering clinical trials. At present, 'hERG assay (hERG Assay)' (hERG assay is to evaluate the inhibitory effect of drugs on hERc current in stable expression cell lines) is considered to be the existing gold standard for preclinical cardiac safety assessment, and it is also the necessary information for new drug approval required by FDA.

Pharmaceutical companies invest in R&D to deliver high-quality and innovative products to the market, and current trends show that top pharmaceutical companies are increasing R&D efficiency through substantial R&D investments to achieve long-term ROI and through collaborative R&D efforts, which will help increase demand for preclinical and clinical services, including cardiac safety assessments.
