Cardiac safety services can be defined as services that deal with supporting and designing clinical trials and other studies required for the monitoring of cardiac safety. Cardiac safety services are focused on monitoring the entire cardiac safety profile across various phases of clinical trials, including Phase I to Phase IV. These studies are done in compliance with FDA, PMDA, EMA, and other regulatory bodies. Cardiovascular safety assessment services include non-invasive cardiac imaging, physiologic stress testing, platelet aggregation, ambulatory blood pressure monitoring, and other services, along with the QT studies. Integrated services offering cardiac safety services are mostly preferred owing to the bundling of services with focus on end-to-end development, as compared to the specificity of standalone services
