The global Cardiac Telemetry Systems market size is predicted to grow from US\$ 2383 million in 2025 to US\$ 3861 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

Cardiac telemetry systems are continuous ECG monitoring solutions used in hospital patient-monitoring environments. They typically consist of wearable telemetry transmitters, ECG lead sets, wireless connectivity, central monitoring stations, alarm-management software and data-management platforms. In 2025, Global Cardiac Telemetry Systems sales are estimated at approximately 420 k sets, with an average ex-works price of around 5,800 US\$/set.

The cardiac telemetry value chain starts from ECG electrodes, lead wires, sensors, wireless modules, chips, displays, batteries and medical software, moves through telemetry transmitters, central stations, monitoring algorithms and system integration, and then serves cardiology departments, ICUs, emergency departments, post-operative units and remote monitoring services.

The market is driven by the growing cardiovascular patient population, the need for continuous monitoring outside ICUs, centralized alarm management under nursing-staff pressure, and the shift toward wireless, mobile and interoperable hospital monitoring. As hospitals aim to monitor arrhythmia-risk patients, post-operative patients and emergency observation patients without occupying ICU beds, cardiac telemetry is becoming an important extension of enterprise patient-monitoring systems.
