Cardiovascular Prosthetic Products are implantable or external devices that replace or assist parts of the cardiovascular system, such as the heart, arteries, or veins. Examples of cardiovascular prosthetic devices include pacemakers, implanted heart valves, artificial vascular grafts, and stents. These devices significantly improve quality of life and are normally installed by a heart surgeon. They are also used to treat a number of cardiac conditions, including valvular heart disease, congenital heart defects, arrhythmias, coronary artery disease, and heart failure. Aortic aneurysm repair, valve replacement, endovascular stenting, ventricular assist devices, transcatheter aortic valve replacement (TAVR), and other procedures all involve these cardiovascular prosthetic devices.
