The global Carfentrazone-ethyl market size is predicted to grow from US$ 77.53 million in 2025 to US$ 97 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

In 2024, global production of Carfentrazone-ethyl was approximately 4,800 tons, with an average selling price of about US$16,000 per ton. Single-line production capacity was approximately 400 tons per year, with an average gross profit margin of about 20-30%. Carfentrazone-ethyl is a contact, selective herbicide belonging to the triazolinone class. It works by inhibiting an enzyme in the chlorophyll biosynthesis process, leading to the accumulation of toxic intermediates, which damages the cell membranes of weeds, causing them to rapidly dry out and die under light conditions.

The upstream raw materials for Carfentrazone-ethyl mainly include basic chemical products and intermediates such as m-trifluoromethylaniline, p-chlorotrifluorotoluene, and glycine. Its downstream applications are highly concentrated in the agricultural sector, primarily used for post-emergence management of cereal crops such as wheat, corn, and rice, as well as lawns, to control various broadleaf weeds and sedges.

United States market for Carfentrazone-ethyl is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Carfentrazone-ethyl is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Carfentrazone-ethyl is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
