The global Cargo Thermal Blanket market size is predicted to grow from US$ 1208 million in 2025 to US$ 2009 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2024, global cargo thermal blanket production reached approximately 23.5 million units, with an average global market price of around US$ 50 per unit. The gross profit margin of major companies in the industry is between 30% ? 45%. Single-line production capacity is 2 ? 4 million units/year. Cargo thermal blankets are specialized insulating covers designed to protect temperature-sensitive goods?such as pharmaceuticals, chemicals, and perishable food?during transport. They help maintain a stable internal temperature by reducing heat transfer caused by solar radiation, ambient heat, or cold conditions.

The cargo thermal blanket market is witnessing rapid expansion, primarily driven by the pharmaceutical cold chain, global food trade, and the need for temperature stability in chemical logistics. Rising demand for vaccines, biologics, and specialty medicines that require strict thermal protection has significantly boosted adoption. In parallel, the growth of e-commerce in fresh food and the globalized supply chain has created new opportunities for thermal packaging solutions. Manufacturers are focusing on lightweight, reusable, and recyclable materials to align with sustainability goals. Moreover, advances in reflective films, nonwoven fabrics, and multi-layer insulation structures are enhancing product efficiency. Regions like North America and Europe are leading in adoption due to stringent pharmaceutical regulations, while Asia-Pacific is expected to register the fastest growth, supported by expanding pharmaceutical production and food export activities.
