The global Caro's Acid market size is predicted to grow from US\$ 175 million in 2025 to US\$ 242 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Caro's Acid is a highly reactive oxidizing agent typically produced by reacting concentrated Sulfuric Acid with Hydrogen Peroxide, forming a powerful peracid used for disinfection, bleaching, and advanced oxidation processes. Its supply chain begins upstream with the production of sulfuric acid (via sulfur combustion and contact process) and hydrogen peroxide (mainly through the anthraquinone process), followed by on-site or near-site synthesis of Caro's Acid due to its instability and short shelf life, which limits long-distance transportation. Midstream activities involve formulation into stabilized solutions or blends (e.g., with stabilizers or as part of peroxygen systems), while downstream distribution targets industries such as water treatment, pulp & paper bleaching, electronics cleaning, and chemical synthesis, where it is often generated in situ or supplied as part of integrated oxidant systems by specialty chemical producers. In 2025, global Caro's Acid output was about 170,000 tons with 210,000 tons of capacity, average prices of USD 900-1,600 per ton, and gross margins around 22%.

United States market for Caro's Acid is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Caro's Acid is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Caro's Acid is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
