Carpal Tunnel Syndrome is a medical condition of numbness, weakness, and tingling in the hand due to compression of the median nerve in the wrist. The median nerve is located on the palm side and also known as the carpal tunnel. This nerve is responsible for sensation in the thumb, the index finger, the middle finger, and part of the ring finger. The key work of the median nerve is to supply the impulse to the thumb muscle. Excess pressure in the wrist and the median nerve causes swelling. Some other frequent conditions associated with carpal tunnel syndrome are thyroid dysfunction, high blood pressure, diabetes, and autoimmune disorders such as rheumatoid arthritis. The most common signs and symptoms of carpal tunnel syndrome are tingling, numbness, pain in the thumb, pain and burning that travels up to the arm, weakness in the muscles of the hand, and the wrist pain at night that interferes with sleep. Health care specialists recommend nerve conduction studies, physical examination, and other tests to confirm the presence of carpal tunnel syndrome.
