Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Carrier Aggregation Solutions market.

Carrier aggregation is a key aspect of LTE-A for its combination of two or more blocks of spectrum (also known as component carriers). The addition of multiple component carriers for wider channel bandwidths achieves a greater mobile Internet spectrum for mobile Internet. Carrier aggregation was introduced in 3rd Generation Partnership Program (3GPP), Release 10 (in 2011). South Korea deployed the first LTE-A network with carrier aggregation in 2013.

One driver in the market is high proliferation of mobile computing devices. The demand for mobile computing devices is surging among mobile users and business travelers who need connectivity and portability. Consumers are using these devices for various purposes such as surfing the web, accessing social networking apps, reading news,

and checking emails. The high Internet penetration rate and the availability of high data rates at high speeds are driving the demand for mobile computing devices. At present, the network traffic is growing at an exponential rate, primarily because of the increased popularity of mobile computing devices.
