The global Cart-based Ultrasound System market size is predicted to grow from US\$ 3225 million in 2025 to US\$ 4700 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

In 2025, global Cart-based Ultrasound System production reached approximately 507 k units?with an average global market price of around US\$ 6500 per unit, and a gross profit margin of approximately 20%-40%. Cart-based Ultrasound Systems are full-size medical ultrasound imaging systems installed on mobile carts and equipped with high-performance displays, control panels, multiple probe ports, advanced imaging software, and diagnostic workflow functions. These systems provide real-time ultrasound images for abdominal, cardiac, obstetric, gynecological, vascular, musculoskeletal, urological, emergency, and general clinical examinations. Compared with portable or handheld ultrasound devices, cart-based systems offer stronger image quality, broader probe compatibility, more complete Doppler functions, larger screens, better ergonomics, and higher suitability for hospitals, imaging centers, specialist departments, and high-volume diagnostic environments. The industrial chain of Cart-based Ultrasound Systems includes upstream ultrasound probes, transducers, piezoelectric materials, beamforming chips, signal processors, displays, control panels, power modules, cables, carts, housings, imaging software, Doppler modules, and AI algorithms. The midstream includes system design, probe development, image processing, Doppler integration, hardware assembly, software development, calibration, clinical testing, quality control, regulatory certification, and performance validation. Downstream applications include hospitals, diagnostic imaging centers, obstetrics and gynecology departments, cardiology departments, emergency departments, intensive care units, surgical departments, community medical institutions, and private clinics. Related services include installation, training, maintenance, probe repair, software upgrades, spare parts

supply, image optimization, and after-sales technical support.

United States market for Cart-based Ultrasound System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
