A cartridge tray is a specialized tray - like structure designed for specific applications. In the context of distillation columns, it is typically used in small - diameter columns ranging from 300 to 800 mm or less than 3 feet (0.9 m) in diameter. It serves as an alternative to traditional ring - supported trays and is considered a perfect hardware solution for columns with unique tray requirements. For example, in fouling and foaming systems, high - pressure applications, and systems that require good efficiency with a large turndown, cartridge trays can be advantageous. They can be equipped with various types of tray decks and downcomers, and are usually made of materials such as carbon steel, stainless steel, and other specialty alloys. In addition to the distillation field, the term 'cartridge tray' may also refer to trays used to hold other cartridge - like objects in other industries, such as trays for holding needle cartridges in the tattoo industry, which are designed to neatly arrange and hold cartridge needles and may have features like a slanted placement and a reservoir to catch ink.

United States market for Cartridge Tray is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
