A case erector machine, also known as a carton erector or box erecting machine, is an industrial packaging machine used to automate the process of forming and erecting corrugated cardboard boxes or cases. These machines are commonly used in various industries for packaging and shipping products. Case erector machines significantly increase packaging efficiency and productivity by automating the box forming process. They can rapidly erect a large number of boxes in a short time, reducing the need for manual labor and accelerating the packaging line. Automation of the box forming process reduces the reliance on manual labor for repetitive and physically demanding tasks. This can lead to cost savings in terms of labor expenses and also minimize the risk of worker fatigue or injuries. Case erector machines enable packaging lines to handle higher throughput, allowing companies to meet increased demand and scale

their operations without significant manual labor investment.
