Case fan fluid bearings are a type of bearing used in case fans that uses a fluid that allows the fan to spin smoothly with very little friction, helping to reduce noise and extend the life of the fan. Fluid bearings work by using the rotation of the fan shaft to create a thin layer of fluid between the shaft and the bearing. This fluid acts as a lubricant, reducing friction and allowing the fan to spin smoothly and quietly. Because fluid bearings have very little friction, they last longer than other types of bearings and require less maintenance.
