The cassette membrane ultrafiltration system is a water treatment equipment based on ultrafiltration membrane technology. It adopts a modular design and encapsulates the ultrafiltration membrane device in a special box structure. It is usually used for water purification, filtration and separation. Through the action of the semi-permeable membrane, the system can effectively remove suspended matter, bacteria, viruses, macromolecules and other pollutants in the water, while retaining dissolved salts and small molecules in the water. Due to its modular design, the cassette membrane ultrafiltration system has high operational flexibility, easy installation and maintenance, and is widely used in drinking water treatment, industrial wastewater reuse, food and beverage processing and water quality treatment in the pharmaceutical industry.

United States market for Cassette Membrane Ultrafiltration System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
