According to our (LP Info Research) latest study, the global Cast AlNiCo Permanent Magnets market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Cast AlNiCo Permanent Magnets is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Cast AlNiCo Permanent Magnets market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Cast AlNiCo Permanent Magnets are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Cast AlNiCo Permanent Magnets. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Cast AlNiCo Permanent Magnets market.

Cast AlNiCo magnets are produced by traditional casting process. First, raw materials with different compositions are melted and poured into sand molds, and then the blanks are heat treated, cooled and tempered. The hard magnetism of AlNiCo magnets originates from a two-phase nanocomposite structure composed of a ferromagnetic FeCo-rich phase and a nonmagnetic AlNi-rich phase formed by high-temperature homogeneous amplitude modulation decomposition. The FeCo phase has the highest saturation magnetization and high Curie temperature so far, but the magnetocrystalline anisotropy is very low, which is not enough to induce strong coercive force. Since the magnetic properties depend on the different saturation magnetization of the two phases

and the shape anisotropy of the ferromagnetic phase, in order to obtain high coercivity and remanence, AlNiCo alloys must have columnar crystals with reasonable orientation and high magnetic anisotropy. The Curie temperature of AlNiCo magnets can reach 890°C, which has excellent temperature resistance, high temperature stability and corrosion resistance. It is still widely used in the automotive industry, instrumentation, electroacoustics, teaching, aerospace and military, etc. field.
