Cast aluminum control arm is a kind of component used for automobile suspension system. It is usually used to connect the suspension rod and wheel bearing of the suspension system to support and control the wheel movement. The cast aluminum control arm is made of aluminum alloy material and has high strength and corrosion resistance. The main functions of the cast aluminum control arm include: bearing the vertical load of the wheels: the control arm bears the vertical load of the wheels by connecting the suspension rod and wheel bearings, ensuring contact between the wheels and the ground. Control the movement of wheels: the control arm controls the movement of wheels by connecting other parts of the suspension system, such as

shock absorbers, springs, etc., so that the vehicle has stable suspension performance and good controllability. **Relieve road impact:** The control arm uses components such as shock absorbers to alleviate road impact and improve driving comfort. **Adjusting the geometric parameters of the wheels:** The length and shape of the control arm can affect the geometric parameters of the wheels, such as toe in, toe in, and yaw, thereby affecting the driving stability and steering performance of the vehicle. Cast aluminum control arms have the advantages of light weight, high strength, and corrosion resistance, and are widely used in the automotive manufacturing industry. It can be applied to different types of vehicles, including passenger cars, commercial vehicles, off-road vehicles, etc. In the automotive manufacturing process, cast aluminum control arms need to undergo strict quality control and testing to ensure their safety, reliability, and performance stability.
