The cast copper rotor asynchronous motor is a high-efficiency asynchronous motor that uses an integral copper casting process to manufacture the rotor. Its core advantage is that the rotor bars and end rings are made of high-conductivity copper material, which is formed through one-time casting to replace the traditional aluminum die-casting structure. Compared with ordinary aluminum rotor motors, cast copper rotors have lower resistance and higher thermal stability, which greatly improves motor efficiency, starting torque and overload capacity, and is particularly suitable for industrial application scenarios with high loads, frequent starts and stops, or long-term operation.
