Cast Iron Cooling Staves are components used in the steelmaking process, specifically in blast furnaces, to facilitate the cooling of the furnace wall. These staves are made of cast iron and are designed to absorb and dissipate the intense heat generated within the furnace. They are typically attached to the furnace shell, allowing coolant (often water) to circulate through them and maintain an optimal temperature, preventing the furnace from overheating. Cast iron cooling staves help improve the furnace's structural integrity and efficiency, contributing to the overall safety and longevity of the blast furnace.
