Cast Iron Gear Pumps for Off-Highway Vehicles are hydraulic power components designed specifically for off-highway applications such as construction machinery, agricultural equipment, and mining vehicles. Their core consists of a cast iron housing and precision meshing gears. The rotation of the gears forms a sealed cavity to transport hydraulic oil, providing stable pressure and flow for the equipment. This type of pump is manufactured from high-strength cast iron and has properties such as high-pressure resistance, impact resistance, and corrosion resistance. It is suitable for the steering, lifting, and transmission systems of equipment such as excavators, loaders, and tractors. Compared to aluminum pumps, cast iron gear pumps perform better in heavy-load, dusty, and muddy environments, and are less expensive, but are heavier. Future technological trends will focus on lightweight design, intelligent pressure compensation, and IoT status monitoring to meet the upgrade needs of new energy engineering machinery and automation equipment.
