Cast iron knife gate valve (slurry valve): the valve body adopts an integrated structure to eliminate a series of problems such as valve body leakage and aging of sealing gasket. It has longer service life and simpler maintenance.

It is sealed at the bottom of the valve body. There is no groove in the valve cavity, which is not easy to block and no residue. The pipeline is easy to clean. The flange sealing surface is embedded with O-ring without additional flange gasket. It is simple and convenient to install, with small friction coefficient and flexible opening and closing. This series of knife gate valves can be equipped with manual, electric, pneumatic, electro-hydraulic, hydraulic, bevel gear drive and many other actuators to meet the requirements of different industries and mines.
