The global Cast Iron Safety Valve market size is predicted to grow from US\$ 2899 million in 2025 to US\$ 4048 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Cast Iron Safety Valve is a safety - critical device made primarily from cast iron. It is an automatic pressure - relieving valve used to protect a system (such as a boiler, pressure vessel, or pipeline) from over - pressure conditions. The valve is designed to open automatically when the pressure inside the system exceeds a preset safe limit. This allows the excess fluid (which can be a gas, a liquid, or a vapor - liquid mixture) to escape, thereby reducing the pressure and preventing potential damage or dangerous situations such as explosions or ruptures. Cast iron is chosen as the material due to its good casting properties, durability, and relatively low cost, making it suitable for many industrial and commercial applications where a reliable and cost - effective safety valve is required.

United States market for Cast Iron Safety Valve is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
