Catalyst Analysis Service is a professional technical service system integrating advanced characterization techniques, reaction evaluation devices, data analysis algorithms, and industry-standard methods for the design of industrial catalytic materials, finished catalysts, catalytic reaction systems, and deactivated catalysts. Its core is a comprehensive analysis encompassing macroscopic performance quantification, microscopic structure analysis, reaction mechanism exploration, and failure cause localization. This system systematically evaluates the activity, selectivity, stability, structural characteristics, and application suitability of catalysts, revealing the intrinsic relationship between catalyst structure, performance, and operating conditions. It addresses technical challenges throughout the entire lifecycle of catalyst development, production, and industrial application, providing scientific data support for catalyst formulation optimization, production quality control, process parameter adjustment, failure early warning, and regeneration. Ultimately, this improves catalytic reaction efficiency, reduces industrial production costs, and ensures long-term stable operation of catalytic plants.
