The global Cataract Laser Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Cataract laser machine is a medical device specially used for treating cataracts. Cataract laser machine mainly uses the energy characteristics of laser to cut or emulsify the lens of cataract patients by precisely controlling the wavelength, power and focal point of laser. Laser can generate high temperature and high energy density, so as to effectively cut or emulsify the cloudy lens tissue, making it transparent or easy to remove. There are many types of cataract laser machines, among which the most common ones include YAG laser machine. These laser machines have the advantages of small incision, fast recovery and short operation time. YAG laser machine uses the light waves emitted by infrared laser to cut the lens, and its accuracy and safety are relatively high.

United States market for Cataract Laser Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Cataract Laser Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
