Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Catheter-Based Renal Denervation System market.

Renal Denervation (RDN) is a percutaneous interventional treatment method. It mainly uses energy such as radio frequency and ultrasound to eliminate the afferent and efferent nerves in the renal artery, blocking the signal conduction between the brain and sympathetic nerves to a certain extent, thereby reducing the risk of high blood pressure. The sympathetic nerve excitability of patients with high blood pressure can achieve long-term and stable blood pressure lowering effects with one minimally invasive surgery.

Currently, the typical models of Renal Denervation (RDN) System include Recor Medical's Paradise and Medtronic's Simplicity Spyral, etc.
