Cathode Ramming Paste is a specialized refractory material used in the aluminum smelting industry for the maintenance and operation of cathodes in aluminum electrolytic cells. It plays a crucial role in the production of aluminum metal through the electrolytic reduction of alumina (aluminum oxide) in an aluminum electrolytic cell.

Cathode Ramming Paste is primarily used in the aluminum smelting industry for the maintenance and repair of cathodes in the aluminum electrolytic cell. The aluminum electrolytic cell consists of an anode (positive electrode) and a cathode (negative electrode) immersed in an electrolyte. During the electrolytic process, alumina is

dissolved in the electrolyte, and aluminum metal is produced at the cathode. The cathode lining, which comes in contact with the molten aluminum, needs to be maintained to ensure efficient aluminum production and cell operation.
