The global Cathodic Arc Ion Plating Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Cathodic arc ion plating equipment is an efficient, pollution-free ion plating equipment. It has the advantages of fast deposition speed, high ionization rate, large ion energy, simple equipment operation, low cost, and large production volume. The principle of cathode arc ion plating is based on cold cathode self-sustained arc discharge plasma evaporation and ionization plating materials, combined with pulse bias technology, to increase the energy and activity of deposited particles and enhance various properties of the film layer. It can not only coat the surface of metal products but also coat the surface of non-metal products; it can coat metal films, titanium nitride, titanium carbide, zirconium nitride, chromium nitride and nickel, chromium, copper and other compound films, etc. It can also be coated with super hard film, multi-compound film, titanium nitride gold-doped film, etc.
