Cationic Polyester Chip refers to a type of polyester material that is modified with cationic dyeability to enhance its dyeing properties. Polyester Chips, also called Polyethylene Terephthalate (PET) Chips, are the raw materials used in the production of various polyester-based products. Cationic Polyester Chips undergo a chemical process that introduces cationic dye molecules onto the polymer chain, making them more receptive to dyes during the manufacturing of textiles. This modification enhances the color-fastness and color yield of polyester fabrics, making them suitable for applications requiring vibrant and long-lasting colors. Cationic Polyester Chip is widely used in the textile industry for producing high-quality, dye-compatible polyester fabrics.

The global Cationic Polyester Chip market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
