The global Cattle Dehiders market size is predicted to grow from US$ 1597 million in 2025 to US$ 2069 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Cattle dehiders are mechanical devices specifically designed for skinning cattle hides. They utilize advanced skinning technology and automated control systems to efficiently and accurately complete the hide skinning process, significantly improving skinning efficiency and the integrity of the hides. These machines typically consist of a skinning blade, transmission system, and control system. The skinning blade is made of high-strength alloy material, featuring sharpness and wear resistance, capable of easily skinning cattle hides. The transmission system drives the skinning blade to rotate and move, ensuring a smooth and continuous skinning process. The control system monitors and adjusts the operating status of the dehider to ensure skinning quality and safety. When using a cattle dehider, operators only need to fix the hide on the machine and set the skinning parameters, and the machine will automatically complete the skinning process. After skinning, operators can further process and treat the hide, such as trimming and cleaning. Cattle dehiders are widely used in the livestock industry and leather processing fields, providing efficient and convenient solutions for hide skinning and processing.
