The global CBN Abrasives market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

CBN Abrasives are synthetic materials composed of cubic boron nitride, known for being the second hardest material after diamond. They offer exceptional hardness, thermal stability, and wear resistance, making them highly valuable in various industrial applications. CBN abrasives provide twice the high-temperature resistance of diamond and four times the wear resistance of traditional abrasives. They are used to efficiently grind materials such as superalloys, hardened steel, and thermal spraying coatings, improving processing quality and reducing thermal damage. These abrasives extend the life of grinding wheels, reduce machine tool wear, and enhance productivity and efficiency in modern automated manufacturing environments.

United States market for CBN Abrasives is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for CBN Abrasives is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
