The global CBN and Diamond Superabrasives market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

CBN and Diamond Superabrasives are highly durable materials used in industrial cutting, grinding, and drilling applications. CBN is a synthetic material second only to diamond in hardness, offering superior thermal and chemical stability, making it ideal for machining ferrous materials. Diamond Superabrasives, made from both natural and synthetic diamonds, are the hardest known materials and are particularly effective in cutting non-ferrous materials like ceramics, glass, and composites. Both types of superabrasives enhance productivity and precision in various manufacturing processes due to their exceptional hardness and wear resistance.
