The global CBRN Air Filtration System market size is predicted to grow from US$ 2254 million in 2025 to US$ 3413 million in 2031; it is expected to grow at a CAGR of 7.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

CBRN air filtration system effectively intercepts, adsorbs, transforms or removes chemical, biological, radioactive, nuclear and explosive substances in the air through physical, chemical or physical and chemical methods. Its main function and goal is to provide efficient filtration and protection mechanism to ensure that personnel, equipment and environment are protected from these harmful substances.

The illegal spread of chemical weapons (such as nerve agents VX, Novichok), highly pathogenic biological agents (such as Ebola virus, anthrax spores), and radioactive materials has forced the continuous upgrading of filtration systems. After 9/11, the risk of CBRN terrorist attacks on civilian facilities increased, driving the demand for protection systems in public places (subways, airports). The potential use of CBRN weapons in modern warfare (such as the Syrian chemical weapons incident) prompted the military to strengthen protective equipment.

Breakthroughs in nanofiber filter materials (such as electrospinning technology) and activated carbon composites have improved the adsorption efficiency of particles and gases.

Integrated sensors (such as laser particle counters, chemical spectrometers) enable real-time detection and adaptive filtration. Military/emergency scenarios require portable systems, while commercial buildings pursue low-energy filtration solutions (such as variable frequency fans).

COVID-19 highlights the importance of bioaerosol filtration and promotes the use of HEPA/ULPA filters in medical facilities. The demand for emergency response systems has surged after chemical plant leaks (such as the Tianjin Port explosion) or nuclear accidents (such as the Fukushima nuclear leak).
