CCD filters, or Charge-Coupled Device filters, are optical filters used in conjunction with CCD cameras or sensors. CCDs are electronic devices used in various applications for capturing and detecting light.

CCD (Charge-Coupled Device) technology was evolving to offer higher resolution and improved sensitivity. Manufacturers were developing CCD sensors with increased pixel counts, enhanced quantum efficiency, and reduced noise levels. CCD filters were in demand for various scientific and research applications, including astronomy, spectroscopy, and fluorescence microscopy. Researchers were looking for advanced filters that could provide better signal-to-noise ratios and specific wavelength selection. CCD filters were used in industrial imaging applications for quality control, machine vision, and non-destructive testing. The market saw growth in applications like defect detection and material analysis.
