The global CCD Image Sensors market size is predicted to grow from US\$ 1670 million in 2025 to US\$ 2056 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A CCD or Charge-Coupled Device is an electronic device that can be used as the image sensor in place of film in a digital camera, or in devices like microscopes, telescopes, and scanners. CCDs are also used for certain autofocus and light metering systems in film or digital cameras. A CCD is a rectangular semiconductor chip with a surface built of an array of light-sensitive areas (pixels). Each pixel is a kind of combination of photo diode for light-sensitivity and capacitor for analogue value storage. The charge levels for each pixel are read out sequentially and digitized by separate circuitry.

Asia-Pacific dominated the global CCD image sensors market due to the demand generated from China and India.
