The global CCT Controller market size is predicted to grow from US$ 1485 million in 2025 to US$ 2130 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2024, global CCT Controller production reached approximately 37 millions?with an average global market price of around US$ 40 per unit. CCT Controller (Correlated Color Temperature Controller) is an electronic device used to regulate and adjust the color temperature and brightness of tunable white LED lighting systems. Unlike RGB or RGBW controllers that manage color mixing, a CCT controller specifically controls two sets of LEDs—typically warm white (e.g., 2700K–3000K) and cool white (e.g., 6000K–6500K)—to achieve a wide range of white light tones. By varying the intensity of each LED channel, the controller enables smooth transitions from warm to cool light, providing flexible illumination that can mimic natural daylight cycles or create customized lighting atmospheres. Many CCT controllers feature dimming functions, scene presets, and can be operated through wall panels, handheld remotes, or smart interfaces via Wi-Fi, Bluetooth, or Zigbee.

United States market for CCT Controller is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for CCT Controller is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
